Hytork Marine Gears

Foley Marine and Industrial now offers factory remanufactured Hurth and Borg-Warner Marine transmissions. These exchange transmissions, believed to be an industry first, are marketed by Foley under the Hytork brand name. By purchasing an exchange transmission, boaters can save time and money compared to the cost of a brand new transmission or waiting for estimates while the failed gear is sent out for rebuilding locally.

These factory remanufactured units feature all new internal wearing parts including discs, plates, "O" rings, thrust washers and seals. During final assembly each marine gear is blue printed back to original specifications. After load testing the remanufactured gear, Foley Marine paints each gear with a two part marine epoxy and shrink wraps them on a custom shipping cradle. The customer can then use this factory cradle to return his failed gear at his convenience for a core refund.

These Hytork marine transmissions are in stock in most models and ratios including vee drives and are ready to ship. Foley includes a free workshop manual, new fluid and a one year warranty with every gear. They suggest that the customer consider a new damper plate as well as a new shaft flex coupling to protect this new gear.

Suggested pricing on the smaller Hurth gears begins at just \$595.
