monitoring, the JDLink solution also enables John Deere Connected Support, enabling the dealer to remotely identify critical issues and take action minimizing potential downtime or by remotely sending software payloads to ensure the machine is running efficiently.

To learn more about JDLink features as well as the full line of John Deere construction equipment, visit johndeere.com or contact a local dealer. The specific services, tools, and features available may vary depending on location and machines.

Foley Take-Off Clutches

Loggers operating wood chipper and tub grinders with twin disc style clutches no longer need to worry about downtime. Foley Engines specializes in Twin Disc/Rockford and WPT power take-off clutches. The clutches are often called "hand clutches." Foley

now offers both new and factory remanufactured power take-off (PTO) clutches with upgraded severe duty components including 100% Kevlar composite discs. These proprietary Kevlar composite linings have as much as a 300% longer service life compared to the molded fiber friction discs commonly used, and avoid failures caused by broken teeth.

Not only do their Kevlar plates last longer, Foley remanufactured exchange units eliminate the delay and downtime in having a PTO

clutch rebuilt locally. Additionally, the remanufactured units offer the clutch owner significant savings compared to buying a new unit.

Given its more than century-long history, the company can also help people with obsolete units for which parts are no longer available. Foley Engines operates from a 20,000 SF facility with modern machine tools and equipment to fabricate new replacement parts. The company stocks approximately 200 new and remanufactured PTOs that are ready for same day shipment. Visit foleyengines.com to learn more.

Deere Track Cutters

Looking to meet the needs of the most demanding forestry applications, John Deere now offers a 330-horsepower option for the 853M tracked feller-buncher and 853MH tracked harvester equipped with the optional Dedicated Travel System feature. The combination of the travel and horsepower options on the 853M and 853MH machines enables John Deere to deliver enhanced performance in harsh conditions.

The Dedicated Travel System feature provides focused hydraulic functionality for the tracks, while providing independent hydraulic power and performance to the swing, boom, and attachment functions. This hydrostatic control of the travel function increases overall machine efficiency, especially during heavy multifunctioning. The additional horsepower is fully available for additional work, adding to the increased performance and productivity of the equipment.

The horsepower update further adds to the customer-driven features found on the M-Series and MH-Series machines. The operator station was designed by loggers, for loggers, with maximum comfort in mind. Floor-to-ceiling windows maximize visibility, and ergonomically designed controls further enhance the operator experience. The Rapid Cycle System allows for low-effort joystick control of all boom functions, considerably reducing operator fatigue and increasing productivity.

To learn more about the 853M tracked feller-buncher and 853M tracked harvester, as well as the complete John Deere lineup of forestry equipment, visit John-Deere.com or your local John Deere dealer.

Keep your equipment running cool as

ICE Companies, Inc.

"My trailer unit from ICE is perfect for keeping all my logging equipment clean and cool. The special system for cleaning radiators is the best I have ever used."
